10.4.2 Cauchy Sequences are Bounded

A Cauchy sequence is bounded – nonstandard version.

lemma *NSCauchy-NSBseq*: $NSCauchy\ X \implies NSBseq\ X$
<proof>

10.4.3 Cauchy Sequences are Convergent

Equivalence of Cauchy criterion and convergence: We will prove this using our NS formulation which provides a much easier proof than using the standard definition. We do not need to use properties of subsequences such as boundedness, monotonicity etc... Compare with Harrison’s corresponding proof in HOL which is much longer and more complicated. Of course, we do not have problems which he encountered with guessing the right instantiations for his ‘epsilon-delta’ proof(s) in this case since the NS formulations do not involve existential quantifiers.

lemma *NSconvergent-NSCauchy*: $NSconvergent\ X \implies NSCauchy\ X$

for $X :: nat \Rightarrow 'a::banach$
<proof>

10.5 Power Sequences

The sequence x^n tends to 0 if $0 \leq x$ and $x < 1$. Proof will use (NS) Cauchy equivalence for convergence and also fact that bounded and monotonic sequence converges.

We now use NS criterion to bring proof of theorem through.
